Professional Summary

Computer Science student with a technical background in Information Technology and hands-on experience in backend development using Java, Spring Boot, and RESTful APIs. Experience working with relational and non-relational databases (SQL and NoSQL), cloud platforms (AWS, Google Cloud), and containerization with Docker.

I actively develop personal and academic projects focused on backend architecture, authentication systems, scalable applications, and cloud deployment. Strong interest in backend development, microservices, and cloud-native applications, continuously improving skills through real-world projects and modern development practices.

Technical Skills

Backend

Java
Spring Boot
Spring Security
APIs REST
Node.js

Databases

MySQL
PostgreSQL
MongoDB

Cloud & DevOps

Brief experience with AWS (EC2, S3)

Google Cloud

Docker

Git / GitHub

Software Engineering

Clean Code

Layered Architecture

Data Modeling

Code Versioning

Experiences

Compuway Courses — Technology Intern / Technical Support (Junior) — 2025–2026

I provided day-to-day technical support, performing fault analysis and troubleshooting on computer systems and environments. I was responsible for responding to technical requests, assisting in the organization of system configurations, and monitoring incidents, ensuring the availability of the applications used by the company.

During the internship, I developed strong problem-solving, logical reasoning, and communication skills with users, in addition to collaborating on the improvement of internal processes. I had direct contact with technologies such as Java, Python, and Office Suite (Word, Excel, PowerPoint, and Outlook), also supporting activities related to basic infrastructure and operational support.

Tools and technologies used: Java, Python, and Office Suite.

Projects

MusicApp — Fiec Final Course Project — 03/2025 - 06/2025

I worked on developing a REST API for event management using Java and Spring Boot, implementing authentication and authorization with Spring Security and JWT. I configured data persistence with JPA/Hibernate and integrated log monitoring via Kibana. I used Docker

for application containerization and GitHub for versioning and source code control. I deployed on AWS with EC2 and S3, gaining practical experience in backend, security, observability, cloud computing, and basic DevOps.

Tools and technologies used: *Java, Springboot, JPA, Spring Security, JWT, OAuth2, MySQL, Docker, AWS, EC2, S3, Firebase Notification.*

NextSeguros Challenge — Job opportunity — 11/2025

I worked on developing a bill processing system with modern layered architecture, using Java and Spring Boot to implement business rules, including financial and insurance validations. I used PostgreSQL as the database and optimized queries with Spring Data JPA and Hibernate, ensuring greater performance and data consistency. This project strengthened my experience in backend, relational modeling, and building complex validation logic.

Tools and technologies used: *Java, Springboot, JPA, PostgreSQL.*

Realtime Chat — Personal project — 01/2026

I worked on developing a real-time chat platform using Node.js and WebSockets for bidirectional communication. I integrated the backend with the frontend in React, ensuring low-latency message delivery. I structured event processing to support multiple simultaneous connections, strengthening my experience with real-time systems, full stack integration, and scalability.

Tools and technologies used: *JavaScript, Node.js, React, WebSockets*

Education

Graduation

Bachelor's Degree in Computer Science — UNIMAX (Currently studying)

Undergraduate program focused on computational logic, data structures, object-oriented programming, databases, software engineering, and networking fundamentals. Development of practical projects involving backend systems, RESTful APIs, database integration, and cloud and infrastructure fundamentals.

Willing to relocate and transfer universities if necessary.

I.T Technician — FIEC (2024–2025)

Solid training in the fundamentals of Information Technology, with a focus on developing logical thinking applied to programming and building technological solutions. During the course, I deepened my knowledge of programming logic, systems development, databases, basic networks, technical support, and computer maintenance.

Throughout the course, I strengthened my skills in programming languages such as Java, JavaScript, and Python, as well as web technologies such as HTML and CSS, applying this knowledge to practical projects and real-world problem solving. I also developed skills in system analysis and troubleshooting, computer environment organization, and technical support.

I participated in the development of projects using modern development technologies, expanding my experience with React for frontend, Spring Boot for backend, Docker for containerization, and cloud services such as AWS and Firebase, which contributed to my evolution as a developer and to building a solid foundation focused on the technology market.

Google Cloud Implantation — SENAI (2024)

Course focused on cloud computing, covering the creation and management of cloud environments, application deployment, fundamentals of infrastructure as a service (IaaS), resource organization, and best security practices in Google Cloud environments.

Languages
